## PAINT BOOTH LIGHTING

ENERGY SAVING LAMPS & FIXTURES

LED T8 Lamps are an ideal energy saving choice for linear fluorescent light fixtures. LED lights can be easily integrated into any new or existing Global Finishing Solutions® (GFS) equipment, without having to change the fixture.

### EASY INTEGRATION

LED Lamps are compatible with GFS linear light fixtures, including inside access, corner paint booth light fixtures and general purpose light fixtures. When retrofitting, it's as simple as changing out the tubes. No rewiring is required because the LED lamps use the existing electrical wiring.

### ENERGY SAVINGS

LED T8 Lamps offer significant energy savings — up to 40 percent\* when compared to traditional fluorescent 32 watt T8 systems. Lower energy consumption allows for short payback periods, making it more cost-effective to upgrade to LED. LED T8 Lamps provide the following:

Wattage	17 watts/tube
Color Temperature	5000 K
Brightness	2200 lumens
Color Rendering Index	82 CRI

\*Actual savings depend on your system configuration.

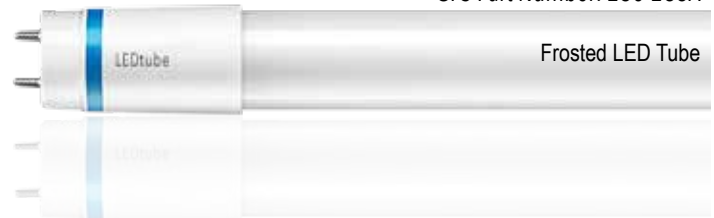

### SUSTAINABLE

LED T8 Lamps emit virtually no ultraviolet or infrared light and don't contain mercury, allowing for non-hazardous waste disposal. Waste is minimized when switching to LEDs since the tubes can be installed in existing light fixtures.

### LONG-LASTING PERFORMANCE

LED lights last longer than traditional fluorescent bulbs, providing up to a 36,000 hour life span that eliminates the need to frequently replace the tubes. Work worry-free in your paint booth with the confidence of a three-year warranty on your LED Lamps.

GFS Part Number: 230-286A

### ETL LISTED

Existing GFS linear light fixtures maintain their original ETL listing when switching over to LED since the LED Lamps use the existing electrical wiring. New GFS light fixtures with LED lamps are also ETL listed.

### GLASS-FREE

You no longer have to worry about dropping and shattering your lights. LED Lamps are glass-free, creating safer working conditions.

### INSTANT ON

No need to wait for light fixtures to turn on — LED Lamps turn on instantly at full luminosity, with no flicker or buzz.

GFS Part Number:

**Four-tube fixture:** LABW12-4-LED

**Six-tube fixture:** LABW12-6-LED
